

Syncing your EarPods

When EarPods do not sync together or become disconnected during use.

1. Turn off both earphones.
2. Continue to hold the “Right” EarPod, and then press the “Left” EarPod button 3 times.
3. After that, stop holding the “Right” EarPod button and wait up 10 seconds, both EarPods should sync automatically.
4. Finally, turn on Bluetooth on your phone to reconnect the EarPods

Note: When EarPods successfully sync, only 1 earphone will flash blue/red indicating that it has entered pairing mode.

If both EarPods Indicator lights flash blue/red, then pairing did not work. Please try sync again by following the above steps.
